

# Pointsec® for Palm OS®

Pointsec® for Palm OS® is a substantial innovation in the enterprise PDA security solutions market. Pointsec for Palm OS appeals to organizations requiring enforceable and manageable security without compromising the user experience.

Pointsec® for Palm OS® combines sophisticated access control and a revolutionary user authentication method, PicturePIN®, to protect confidential information stored within the PDA. Pointsec's mandatory access control complies with tough new security regulations and reduces liability for 3rd party information by ensuring that only authorized users can access applications and information.

Users will readily appreciate the convenience of authenticating with an easily remembered sequence of pictures instead of numbers. Pointsec's QuickPIN® allows the user to quickly re-enter the PDA with an abbreviated version of the PicturePIN. For even greater security, the pictures are scrambled every time the PDA is restarted, making it difficult to learn the PDA's password or PIN by analyzing scratches, thumb- or fingerprints on the screen.

Pointsec for Palm OS also supports alphanumeric passwords to conform with your organization's current password policy.

## FEATURES/BENEFITS

- **Enforceable mandatory access control**
  - Easy to remember PicturePIN and QuickPIN authentication with customizable picture sets, alternatively, alphanumeric passwords and numeric PINs can be used
  - User account lockout – centrally defined number of failed login attempts before lockout
- **Alphanumeric password authentication**
  - Makes it easy to conform with existing corporate security policies
- **User account lockout**
  - Centrally defined number of failed login attempts before lockout
- **Authenticated hotsync**
  - Prevents unauthorized synchronization
  - Prevents unauthorized access to device
- **Remote Help**
  - Using a secure challenge/response procedure, users can call their helpdesk to re-set their password and regain access to their encrypted information
- **Centrally managed security policy**
  - Create, deploy, and update the security policy from one central location
- **3rd party distribution**
  - Compatible with 3rd party distribution tools, administrators can easily integrate Pointsec for Palm OS into existing systems

## Central administration

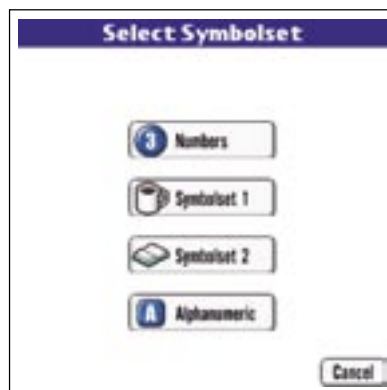

Central Administration is a requirement for the enterprise, no matter the software solution being deployed. Pointsec for Palm OS allows administrators to create, deploy, manage, and update their organization's security policy for mobile devices from one central location. This includes: PicturePIN selection, minimum PIN length, and account lockout settings.

## Secure authenticated hotsync

Essential when selecting a Palm OS security solution. With Pointsec for Palm OS installed, only an authorized user entering the secure PicturePIN can initiate authentication. Secure HotSync prevents a stolen device from being synchronized with an unsecure PC, maintaining the security of the information on the PDA.

## Remote Help

Remote Help (password reset) is another component of central administration and a requirement when deploying thousands of devices. Should a user accidentally lock the handheld device as a result of forgetting their PIN, an administrator or authorized helpdesk employee can assist the user via a challenge-response process. This process enables the user to quickly regain access to their device, reset their PIN, and continue with their work. Pointsec Remote Help for Palm OS does not require a network connection, enabling help to be provided anywhere.

## Pointsec for Palm OS requirements

- 410 KB Memory
- Palm OS 5.X on supported devices
